**KPHC2K-20**

ELKALUB GLS 964/N2 is a lubricating grease with good wear and corrosion protection properties. It has been designed for use in roller and slide bearings, especially for permanently changing directions of movement. The integrated thixotropy permits the build-up of a more solid grease collar at the outer side of bearings. By that, the spin-off of grease and the penetration of foreign particles is reduced. Examples of application: gripper shafts, spindles, badly sealed bearings.
